United States Imports of Merchandise for Consumption

Commodity by Country of Origin

1961 Annual

FT 110

ACKNOWLEDGEMENTS

United States import statistics are compiled from information verified by Customs Examiners on import entries filed with Customs by importers. Under the direction of Philip Nichols, Jr., Commissioner of Customs, and David B. Strubinger, Assistant Commissioner of Customs, the primary responsibility for the verification of import statistical information is assigned to the field and headquarters staff of the Division of Appraisement Administration.

Prepared under the supervision of

J. EDWARD ELY, Chief
Foreign Trade Division

ACKNOWLEDGEMENTS

The statistics in this volume were prepared, under the direction of the Foreign Trade, Economic Operations, Data Processing Systems and Administrative Service Divisions. The persons contributing most to this publication are listed below:

Foreign Trade Division: Import Branch, Victor O. McNabb, Chief; Shirley S. Dungee, Assistant Chief; John R. Anglin, Technical Activities Section; Emanuel A. Lipscomb, Project Development and Evaluation Section; Ralph C. Hamilton, Classification Section. Regulations and Program Coordination Branch, Emerson Jones, Publications Coordination. Economic Operations Division: Special Assistant, Max Van Horn; Clerical Processing Branch, Wesley R. Grier, Chief; Procedures Branch, Nathan Lesowitz, Chief; Methods Evaluation and Determination Branch, Samuel Schweid, Chief; Electronic Programming Branch, Jack A. Scharff, Chief; Nathaniel Swersky, Assistant Chief; Operations Research Branch, George Minton, Chief; Electronic Processing Branch, Margaret R. Rommel, Chief; Directory Branch, Manila C. Ramier, Chief; Foreign Trade Section, Lucille P. Morgan, Chief; New York Office, Emily H. Laut, Chief. Data Processing Systems Division: Systems and Programming, Dorothy P. Armstrong, Assistant Division Chief; Foreign Trade Section, Vincent Greer, Chief. Administrative Service Division: Graphics Branch, Robert H. Brooks, Chief; John F. Lanham, Assistant Chief.

REPORT FT 110-UNITED STATES IMPORTS OF MERCHANDISE FOR CONSUMPTION
Commodity by Country of Origin

OCTOBER 1961

LEVEL OF ACCURACY IN IMPORT STATISTICS

In a later issue of this report, announcement will be made with regard to a new procedure to become effective January 1, 1962, which it is believed will result in the correction of the bulk of importers' and brokers' errors in reporting statistical information before their reports are included in the import statistics. Work by the Bureau of Customs, the Tariff Commission, and the Bureau of the Census is now going forward to permit effective prior verification without delaying the inclusion of the corrections in statistics.

In the meantime, additional more specific information has become available on the degree of inaccuracy in the import statistics for past periods under existing collecting and reporting procedures. This article is for the purpose of passing this new information on to users of the statistics and to describe the results of earlier efforts to improve statistical accuracy.

Prior to 1960, importers, brokers and Customs officials reported imports in terms of two commodity classification systems, the United States Import Duties (USID) for duty determinations, and Schedule A for statistical purposes. The difficulties in reporting with two completely different classification outlines were described in Foreign Trade Statistics Notes of May-September 1958. To surmount these difficulties a new reporting manual, United States Import Duties Annotated for Statistical Reporting (USIDA), was instituted January 1, 1960, merging the two classification systems.

As indicated in the October-December 1959 Foreign Trade Statistics Notes, it was expected that the use of the new USIDA reporting manual would improve the accuracy of reporting on the import entries. It was believed that the new manual which combined the statistical and tariff requirements in one volume in tariff paragraph order would make reporting simpler for importers and brokers. It was also hoped that the new manual would make the work of Customs entry officers easier in the preliminary check which they make of import entries against invoices and other documents. (The Customs entry officers are able to detect and correct some errors which appear in the documents as originally filed, and their corrections are reflected in the statistics.)

While the reporting manual did fill an important need in merging the tariff and statistical classification systems, thereby providing a more convenient tool for encouraging better initial reporting, recent studies show that the improvement in accuracy in the statistics has not met expectations. This stems from the fact that the statistics under present collecting procedures are compiled on an "as entered" basis and do not reflect corrections resulting from a physical examination of the merchandise and invoices by Customs examiners for duty determination purposes. The statistics are compiled on the basis of entries forwarded to the Bureau of the Census as soon as the duties estimated by the importer or Customs broker have been deposited or the duty-free status of the merchandise has been tentatively accepted by Customs pending formal appraisement and liquidation. Although the Customs entry officer has access to the invoices at the time the import entries are received and can check for consistency between descriptions on invoices and those on the entries, he cannot be expected to anticipate changes in classifications and other factors that may be made by the Customs examiner at the time of his visual inspection of the merchandise. This examination now takes place after the statistical copies of the import entries are forwarded to Census.

To ascertain the effects of changes by Customs Examiners on import entries upon the individual commodity classification totals, a study was undertaken jointly by the Bureau of Customs, Tariff Commission, and the Bureau of the Census for the entire flow of imports into the port of Philadelphia during January 1961. This study showed that Examiner changes of all kinds in the importers' or brokers' reporting were made on 25 percent of the import items and changes in classification were made on 14 percent. On the other hand, Census coders who independently verified copies of these same entries, changed less than one-third of the number changed by Customs Examiners. Since most commodity totals are based on very small numbers of items (fewer than 10), these error rates may produce substantial percentage errors in the totals. Only 5,415 items were included in the 1,194 commodity classifications assigned by the Examiners or by Census coders for Philadelphia in January. Value totals for 546 (46 percent) of the 1,194 commodity classifications differed due to differences in classification or value for individual items; 411 differed by more than 10 percent. For 139 (12 percent) of the 1,194 classes, there were differences in value totals not associated with differences in commodity classification, and for 126 (11 percent) there were differences in quantity that did not involve classification differences. These differences included a small number of inadvertent errors on the part of the Examiners in checking the statistical information.

While the entries filed at the port of Philadelphia for a single month represent a small sample of the entries filed at all ports, the results of the Philadelphia study are consistent with the findings in other studies, indicating that numerous changes are made by Examiners that ought to be reflected in the statistics if the data are to approach a desired level of accuracy. For example, changes were made by Philadelphia Examiners on 30 percent of the January 1961 import entries (not items) as compared with changes made on 24 percent of the August 1960 import entries as disclosed on a tally made by the Bureau of Customs for that month at 15 ports. In that study the percentage of entries changed ranged from a low of about 7 percent at one port to a high of about 37 percent at another port. Similarly, another study by the Bureau of the Census covering 5 percent of the entries at the port of New York in June 1960 showed that 23 percent of the items (not entries) included were changed significantly by Customs Examiners. These and other studies show clearly the urgent need for additional action to improve the accuracy of the import statistics, and it is believed that the new procedures to be introduced in January 1962 will accomplish substantial improvement.

IMPORTS OF URANIUM ORE AND CONCENTRATES (EXCLUDED FROM IMPORT STATISTICS) 1942 THROUGH 1960

It was announced in the January and August 1961 issues of this report that data on imports of uranium, thorium, and related commodities which were previously withheld for security reasons would be released. With the exception of data covering imports of uranium ore and concentrates (Schedule A number 6270 700), these figures will be released later in 1962.

The following table represents imports of uranium ore and concentrates entered under Schedule A number 6270 700 during the calendar years 1942[1] through 1960. These figures are those furnished by the Atomic Energy Commission since the records on file in the Bureau of the Census are incomplete for that period.[2] It should be noted that the available country information is limited to Canada, Union of South Africa, and all other as "Unidentified countries"; also, the net quantities and values are in terms of thousands of pounds and thousands of dollars, respectively.

[1]The figures shown for 1942 supersede those previously published in Foreign Commerce and Navigation.

[2]See the explanation in the August 1961 issue of FT 110.

CORRECTED MONTHLY DATA ON IMPORTS OF URANIUM ORES AND CONCENTRATES (SCHEDULE A COMMODITY NUMBER 6270 700) JANUARY-DECEMBER 1961

In addition to the annual data on exports of uranium ore and concentrates (Schedule A number 6270 700) for the years 1942-1960, shown in the preceding notice, corrected monthly data on exports of uranium ores and concentrates during 1961 are also being shown in this annual report (below). Monthly data on exports of uranium ores and concentrates were excluded from the regularly compiled statistics during 1961 and were shown as "special notices" in the front of the regular monthly import publications (FT 110, and FT 120). The following figures for January-December 1961 include all revisions found to be necessary to date.

Effective January 1962, data on exports of uranium ores and concentrates Schedule A commodity number 6270 700, will be included in the regularly compiled monthly reports. Monthly totals for 1961 will be corrected to include data on exports of uranium ores and concentrates by an errata which will be shown in the March 1962 issue of this report.

GENERAL EXPLANATION

COVERAGE

Types of Shipments Included

The import statistics include government as well as non-government shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions and between Puerto Rico and the territories and possessions are not reported as United States imports, but imports into Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped under Customs custody through the United States in transit from one foreign country to another is not reported as imports. In general, the import statistics are a complete record of the physical movement of merchandise into the United States from foreign countries (except for intransit shipments), but there are some exclusions of items of relatively small importance in terms of total value such as gifts valued at less than $100.

Imports for consumption shown in this report consist of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, merchandise entered into bonded manufacturing warehouses (other than smelting and refining warehouses), merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels, and imported ores and crude metals which have been processed in bonded smelting warehouse.

Monthly and Annual Coverage

In general, the compiling procedures provide for the inclusion of shipments in the statistics for the month of import. However, because of processing problems, there has always been a carry-over of a few percent of shipments from their proper month to a subsequent month, usually the following month. Normally, the amount of the carry-over from month to month (and from year to year) remains substantially constant. In March 1958, the amount of the carry-over was increased in order to take full advantage of early release dates made possible with the use of electronic equipment for processing import data.

For individual commodities, the carry-over procedure as a whole may result in the inclusion in the 1961 statistics of some shipments made in 1960, and/or the exclusion from the 1961 statistics of some 1961 shipments which will appear in the 1962 statistics.

RELATED INFORMATION

Information is also compiled for general imports, which represent total arrivals of imported goods (except for in-transit shipments), i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered into bonded storage warehouse, bonded manufacturing warehouse, and bonded smelting and refining warehouse, immediately upon arrival. General import figures covering total trade, country totals and Customs district totals are published monthly. General import commodity statistics are not published but are available for reference purposes.

Trade between the United States, Puerto Rico and United States possessions (not included as United States imports) is presented separately in Report No. FT 800. Statistics on the movement of in-transit merchandise arriving at or leaving the United States by vessel (not included in this report) are also compiled and presented in summary form in Report No. FT 985. In addition, transportation statistics (showing shipping weight as well as value information) are compiled covering that part of general imports of merchandise which arrives by vessel. Summary vessel transportation statistics for both imports and exports are presented in Report No. FT 985. A more complete description of the coverage and presentation of these separate shipping statistics will be found in the introduction to that report.

SOURCE OF INFORMATION

The source of information for all of the imports included in this report is the import entry (various Customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Importers are instructed to report value and country of origin information in accordance with the definitions given below.

VALUATION

The dollar value which should be shown in the import statistics is defined generally as the market value in the foreign country and should exclude the United States import duties, ocean freight and marine insurance. In actual practice only the values reported for imports subject to an ad valorem rate of duty (a percentage of the value) will tend to conform precisely to the valuation definition. Imports subject to an ad valorem rate of duty account for only 10-15 percent of the total value of imports. For merchandise not subject to an ad valorem rate of duty (85-90 percent of imports), the reported values may not be in accordance with the above definition. For example, ocean freight may be inadvertently included in the values, values for shipments between allied firms may reflect arbitrary values, etc.

COMMODITY INFORMATION

Commodity information is reported according to the classifications established in Schedule A, Statistical Classification of Commodities Imported into the United States, and is presented in the order of the numbered classifications in that Schedule. The Imports of Merchandise for Consumption by Subgroup table on page 7 of this report indicates the range of Schedule A commodity numbers covering related subgroups of commodities and will assist in locating in the report the statistics for particular commodities. For precise definition of the individual commodity classifications for which figures are presented, reference should be made to Schedule A. The commodity descriptions in this report are necessarily abbreviated to save printing costs and, therefore, in many cases, they do not contain all of the qualifying information necessary to define clearly the commodity for which statistics are shown. The omission of a Schedule A commodity classification from this report indicates no imports of that commodity valued at more than $100 reported on formal entries. (See Section A of the "Explanation of the Sampling Procedure..." which follows this General Explanation.)

There are substantial difficulties to be faced in obtaining the correct commodity classification. While the more obvious errors in the statistical classifications of commodities by importers may be found during the processing of the statistics, a number of errors may go undetected, especially if the description of the merchandise shown on the entry is too general to specifically identify the proper commodity classification yet does not appear to be in contradiction with the commodity classification number assigned by the importer.

Effective January 1960, the initial reporting of imports is in terms of the 8-digit commodity classifications contained in United States Import Duties Annotated for Statistical Reporting. This publication presents the statistical reporting requirements as well as the tariff requirements in one volume in arrangement of the tariff paragraphs. The U.S.I.D. Annotated attempts to eliminate errors in initial reporting (and in the import statistics) occasioned by the difficulty of cross-classification between the tariff and statistical reporting requirements heretofore in different publications and in different arrangements. (See page i for a more complete discussion of the over-all accuracy of the import statistics in the reprint of an article which appeared in the October 1961 issue of this report.)

For technical reasons, Schedule A commodity classifications which have been established to provide for the reporting of quantity data only are excluded from all monthly tabulations and publications beginning with the March 1958 data and are also excluded from this report. (These commodity classifi-

cations should not be confused with those which provide for the reporting of the dollar value of imports and two units of quantity under the same Schedule A commodity classification number. Both units of quantity for such classifications will continue to be published.) Data for these quantity only commodity classifications excluded from the statistics are being compiled as supplementary information which is available from the Bureau of the Census, Washington 25, D. C. It may be necessary to make a small charge for the transcription of this information in the form of a special report for release to interested parties. Reference copies of the supplemental information are available in the New York Office, Economic Operations Division, Bureau of the Census, Room 434, Customhouse, New York, New York.

COUNTRY OF ORIGIN

Though the country which should be reported in the statistics as the country of origin is defined as the country where the merchandise was grown, mined, or manufactured, the country actually shown in the statistics may in a number of cases represent some other country, such as the country of purchase, lading, or the country in which mixed lots of various origin are consolidated. This is particularly true of goods received from, but not originating in, merchanting or transshipment countries such as Hong Kong, Singapore, Netherlands, Belgium, etc.; in such cases the statistics may credit the shipments to such countries rather than the country of origin as defined. It follows, therefore, that imports from such merchanting or transshipment countries are likely to be overstated and imports from other countries correspondingly understated. Where it is known that a country is not the country of origin, the country of shipment is shown and footnoted in this report.

Effective with the September 1961 statistics, the country designation "Unidentified Countries" (arbitrary country code 998 in import tabulations) is being used to reflect statistics for countries which could not be identified because of illegible reporting on import entries for low-valued shipments. The estimated values for illegible low-valued entries are excluded from the individual commodity and commodity by country totals shown in this report but are included under arbitrary Schedule A commodity number 9999 500.

The geographic definitions of countries (except "Unidentified Countries") reported are shown in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A (see "Commodity Information" above). A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

Countries are listed for each commodity in this report according to continents, in sequence within each continent from north to south and west to east, in accordance with Schedule C. The omission of a country name indicates no imports of that commodity from that country valued at more than $100 reported on formal entries.

Effective June 1961, imports from the neutral zone between Kuwait and Saudi Arabia are credited to Arabia Peninsula States, n.e.c. Prior to that date imports from the neutral zone were credited to Kuwait and footnoted in this report to indicate Kuwait as the country of shipment (rather than the country of origin). No interim revision was made in Schedule C to reflect this change.

SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. (Copies are available for reference at public libraries.) Prior to September 1960, regular subscribers to FT reports were automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). Effective January 1961, this information on imports will be included in the monthly issues of this report. A catalog of United States Foreign Trade Statistical Publications is also available. Data in this report are available for reference purposes prior to the publication of the report or may be obtained in advance of publication on payment of the cost for a special report. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

EXPLANATION OF THE SAMPLING PROCEDURE FOR ESTIMATING LOW VALUED IMPORTS, 1961

A. CHANGE IN EXTENT OF SAMPLING

Beginning January 1958, the United States import statistics include, on a fully compiled basis, all imports individually valued at $100 or more reported on formal entries, and, on a one percent sample basis, all imports individually valued at less than $100 reported on formal entries as well as all imports reported on informal entries. (Informal entries, by definition, contain only items valued not more than $250.)

For the period January 1954-December 1957, imports individually valued $250 or less whether reported on formal immediate consumption or informal entries were excluded from the detailed commodity statistics but included in the overall and summary totals on the basis of a five percent sample.

The September 1957 and January-March 1958 issues of the Foreign Trade Statistics Notes contain articles explaining the basis for the change in the sampling procedure.

B. COVERAGE OF COMMODITY STATISTICS

Effective January 1958 the coverage of the detailed commodity statistics has been broadened to include on a fully compiled basis all formal entry imports individually valued $100-$250. The inclusion of data on these $100-$250 shipments has resulted in the publication of data for some commodities which may not be comparable to the published data for prior periods. In order to provide users of the statistics with some measure of change in comparability in the detailed commodity statistics supplemental data were compiled on the dollar value of the $100-$250 formal entry transactions for the month of January 1958 and published as an appendix to the January 1958 monthly issue of this report.

Prior to 1958 some indication of the undercounting in the commodity data contained in the body of this report as a result of the exclusion of low value shipments was provided on a commodity basis without regard to country at the end of this report in the form of Appendix B. Comparable data for 1958 and later periods for the sampled transactions (formal entry shipments valued $1 to $99 and in formal entry shipments valued $1 to $250) have not been summarized for publication in this report. However, as a possible measure of the probable magnitude of the sampled transactions for individual commodities, 1957 data were retabulated to reflect the change in sample coverage instituted January 1958 and were issued in a supplement to the 1958 calendar year issue of this report.

C. COVERAGE OF COMMODITY GROUP AND COMMODITY SUBGROUP TOTALS

Beginning January 1958 the estimated values for informal entry shipments and for under $100 formal entry shipments are summarized and included under arbitrary commodity number 9999 500 and arbitrary commodity subgroup 990 in group 9. Prior to January 1958 estimated values for shipments valued $250 or less whether reported on formal or informal entries were included in the appropriate commodity group and subgroup totals.

The change in sampling procedure and presentation of the estimated value for low value shipments effective January 1958 may result in understating the value of commodity group totals for other than group 9 by no more than about two percent. The inclusion of the estimated value for low value shipments in group 9 results in overstating the value of imports for that group by about 10-15 percent.

The extent of the undercounting in the value of the commodity subgroup totals as a result of the exclusion of the estimated low value shipments is no more than about five percent except for subgroups covering "Leather, rawhide and parchment manufactures;" "Fodders and feeds, n.e.s.;" "Scientific and professional instruments, apparatus, and supplies, n.e.s.;" and "Books, maps, pictures, and other printed matter, n.e.s.;" all of which may be understated by about 10 to 15 percent. (The commodity subgroup totals formerly presented in the body of this report are now shown separately in the table on page 7.)

Beginning January 1960, subgroup data are presented in terms of 3-digit subgroup classifications. The 3-digit subgroup numbers, replacing the 2-digit code numbers in effect during earlier periods, were established to provide for an increase in subgroup designations effective January 1960. An exact analysis of the probable undercounting of the ten new 3-digit subgroups, which replace four 2-digit subgroups, has not been made. However, the extent of undercounting in the value of the new subgroup totals as the result of exclusion of the estimated low value shipments is probably no more than five percent.

D. THE ESTIMATING PROCEDURE

For imports individually valued under $100 reported on formal immediate consumption entries and for imports reported on informal entries, a one percent sample of import entries is taken. Data are compiled from the sample and multiplied by 100 to obtain the estimates included in the statistics. These estimates are summarized and included in the statistics under:

1. Arbitrary Schedule A commodity number 9999 500 (the number of shipments included in the sample is shown in the quantity column)

2. Arbitrary Customs District code 990 as "Estimated values $1-$99 formal and $1-$250 informal entry shipments" (not shown in this report but published in FT 970-I)

3. Arbitrary commodity subgroup code 990 (shown in this report in the table on imports by subgroup as "Estimated formal entry $1 to $99 and informal entry $1 to $250 shipments," and published in FT 120 as "LOW VALUE DOLLAR EST")

4. Individual country codes as shown in Schedule C

5. The economic class for "Finished manufactures" (not shown in this report but published in FT 930-I and the Quarterly Summary of Foreign Commerce of the United States).

E. ACCURACY OF THE SAMPLE ESTIMATES REPORTED UNDER SCHEDULE A COMMODITY NUMBER 9999 500

When statistics are estimated on the basis of a sample, exact agreement with the results that would have been obtained from a complete tabulation is not expected. The extent to which estimated country totals in this report for the low valued imports (shipments of under $100 in value reported on formal entries and imports valued at less than $250 reported on informal entries) might not agree with a complete tabulation depends on the number of documents which fall in the sample. For each estimated figure in the report the number of documents in the sample on which the estimate was based is given. (In this report the number of documents selected in the sample is shown in the quantity column opposite the commodity and country estimates.)

As an example of the use of the table below, suppose an estimated value of $310,800 is based on 45 documents in the sample. Referring to the line "40-49," one notes the values $79,800 and $99,000. This means that the chances are better than 2 out of 3 that a complete tabulation would have resulted in a figure between $231,000 ($310,800 reduced by $79,800) and $409,800 ($310,800 increased by $99,000).

The table below indicates the degree of reliability to be attached to a specified value.

If the number of documents indicated from the sample is:	Then the chances are better than 2 out of 3 that a complete tabulation would have resulted in a value figure between	
	The specified estimate reduced by[1]	And the specified estimate increased by
0	0	21,840
1	9,840	27,240
2	15,360	31,320
3	19,440	34,560
4	22,800	37,560
5	25,680	40,080
6	28,320	42,480
7	30,720	44,760
8	32,880	46,800
9	35,040	48,720
10	36,960	50,640
11	38,760	52,440
12	40,560	54,120
13	42,360	55,680
14	43,920	57,240
15	45,480	58,800
16	47,040	60,240
17	48,480	61,680
18	49,920	63,120
19	51,360	64,440
20-24	55,200	68,400
25-29	60,000	75,000
30-34	66,000	84,000
35-39	72,000	90,000
40-49	79,800	99,000
50-59	87,600	108,000
60-69	96,000	116,400
70-79	102,000	120,000
80-89	108,000	121,200
90-99	113,640	125,520
100-124	127,680	139,560
125-149	140,400	152,280
150-174	152,160	164,040
175-199	162,960	174,960
200-249	183,000	194,760
250-299	200,880	212,880
300-399	232,920	244,800
[2]400-499	261,120	273,000

[1]The minimum value of a complete tabulation for imports (both formal entries of individual items valued $1-$100 and informal entries valued at $1-$250) must be greater than 1/100 of the estimated amount shown in the report.

[2]If the number of documents in the sample is greater than 499, the sampling variability for the estimates of the low valued shipments will generally be less than 7 percent.

In the event a user desires to combine 2 or more figures which are estimated values, or which include estimated values, the variability of the combined total can be determined by merely adding the sample size for each estimated value and then referring to the line on the reliability table applicable to the combined sample size.

The omission of an estimate of the low valued shipments for any country indicates that there were no low valued import shipments appearing in the 1 percent document sample for the country. This does not necessarily mean that low valued imports were not made.

F. CHANGES IN COVERAGE AND COMPILING PROCEDURES REFLECTED IN RECENT YEAR'S ISSUES OF REPORT NO. FT 110 ARE SHOWN BELOW:

Year	Coverage and Procedure
1952 and prior years	Fully compiled formal entry items by seven-digit commodity numbers. Informal entry items (valued $100 or less) excluded.
1953: January-June	Fully compiled formal entry items by seven-digit commodity numbers. Informal entry items (valued $100 or less) excluded.
July-December	Fully compiled formal entry items valued $100 and over by seven-digit commodity numbers. Estimated dollar value of formal entry items valued at less than $100 included in the total for commodity group 9 "Miscellaneous" and excluded from subgroup and other group totals as well as from the detailed commodity and commodity by country data. Informal entry items (valued $100 or less July and August and $250 or less September-December) excluded.
1954-1957	Fully compiled formal entry items valued $250 and over by seven-digit commodity numbers. Estimated dollar value of formal and informal entry items $250 and under distributed by, and included in the commodity group and subgroup totals.
1958-1961	Fully compiled formal entry items valued $100 and over by seven-digit commodity numbers. Estimated dollar value of formal entry items under $100 and all informal entry items summarized under arbitrary commodity number 9999 500. The estimated value is included in the total for commodity group 9 "Miscellaneous" and excluded from subgroup and other group totals as well as from the detailed commodity and commodity by country data.

[When quantity is reported in two units for a commodity the second quantity is shown separately, without value, under the same commodity number and immediately following the data for the first unit of quantity (e.g. "Cotton cloth" and "Manganese ore," Schedule A commodity numbers 3048 200-3068 950 and 6211 000-6211 300, respectively)]
